

MOBILE BIENNALE BUILDING 3000™ is the ultimate solution for art exhibition organization. Developed in joint collaboration by gruppo A12 and SpecialLab Corporation it will allow you to launch your future international art biennale wherever you wish. MBB 3000™ is based on the internationally awarded LexAfleX Technology®. Protected by more than 1250 international patents, MBB 3000™ is the only mobile biennale building that can be installed in just one week in every geographical, social and meteorological and political condition. Thanks to a joint venture with Cargo Airtransporters, MBB 3000™ can be lifted and transported to any destination using a system of LTA (Lighter Than Air) airships. Each helium airship can lift up to 1000 tons of weight and is operated by a nucleo-solar non-polluting engine. The modules, which compose the MBB 3000™, are completely self-sufficient: electricity is provided by the Iridium-rubidium solar batteries; its purification station produces drinkable water. The interior of every module of the MBB 3000™ can be customized with different artificial and natural lightings, colors and shape. Special modules are produced in case of very large installations and sculptures. The MBB 3000™ is composed of several flying modules, which can be organized according to different shapes, plans and surfaces. The minimal available surface of MBB 3000™ is 2000 square meters for a local Biennale, which can be increased up to 100,000 square meters for an International Biennale. The MBB 3000™ is equipped with electronic security systems, developed in joint venture with RAND Corporation and Brink's: it is protected from external aggressions (riots, strikes, homeless, intrusions) and 100% protected from thieves and burglars. MBB 3000™ is the new fortress of art! MBB 3000™ is designed to provide 1005 security against earthquake, floods, tornadoes, nuclear and chemical assault; epidemics; volcano eruptions. MBB 3000™ comes in different colours: PsychoElectroBlue™; Paranoid Battle Pink™; Anodyne Grey™; Agent Orange™; DDDDeep Dark™. A vast array of optionals is available to customize and design the perfect Biennale according to your needs. A cloning unit, designed by Biotech Development will produce in just a month the entire international curators and international artists that you might need for your purpose. The genetical codes are provided by IntelliBank, the internationally acclaimed gene bank based in Zurich, Switzerland. In case that you need to spread the Biennale throughout the city or territory special IMM 2000™ are available: Informal Moving Modules, which will allow you to have a diffused Biennale. Thanks to their Mimetic Supraskin each module will melt in the surrounding context appearing as if it has always been there. Excellent for use in dismissed factories, churches and warehouses. For national pavilions we can offer you a selection of SAT 2 (Special Art Tanks), a customized version of armored vehicles, which can provide up to 300 square meters of exhibition spaces. SAT 2 are permanently connected to our central security unit thanks to a GPS system. Remember that MBB 3000™ comes in different configurations: MBB 3000-J1™ for jungle territories; MBB 3000-CC™ for urban contexts; MBB 3000-D2™ for desert; MBB 3000-A3™ for Baltic, Scandinavian countries and arctic extreme conditions; MBB 3000-SuperIsland™, a floating Biennale Building, ideal for offshore exhibitions, which might include gambling facilities. So why wait more! Enter now the fantastic globalized world of international art Biennals. If you are a public administration or a private investor and you do not have the necessary infrastructure for organizing one, just rent the Mobile Biennale Building 3000™. Contact our office for financial plans, loans and facilities. MBB 3000™ is patented ISO 200001.
