

PSYCHIC WAR

"The animals look like electronic toys." Delgado

FROM ELECTROMAGNETIC POLLUTION ... to psychotronic weapons

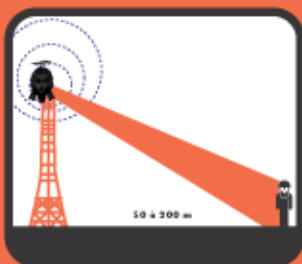

The density of electromagnetic radiation in our environment has been multiplied by one billion in 30 years. This has not left the biosphere untouched [1]. Graphs of the World Bank forecasting trends over the next 30 years indicate that a worldwide increase in brain pathologies, a possible result of this massive growth in EM pollutants. Yet the epidemiological and ecological effects of EM pollution are doubled today by military activity whose aims are population control, experimentation, manipulation or destruction. Beginning in the 1950s, military research sought to clarify and act on human behavior. Arms that work on the same frequencies as the brain were developed [2]. American and Russian military devices acting on the earth's ionosphere through massive emissions of EM waves were developed to act on the climate and the human brain (HAARP project [3]). Thus there arose the possibility of controlling worldwide psychic—as well as climate—activity (cf. Lieutenant Colonel John Alexander, The New Mental Battle). These devices for controlling the mind are to be called "psychotronic architectures," and those in charge of their implementation "psychotronic government."

As for the electric activity of the brain, it can be broken down into four main types of cerebral rhythms: beta (from 14 to 26 Hertz), alpha (from 8 to 14 Hertz), theta (from 4 to 8 Hertz), and delta (less than 4 Hertz). Beta is the rhythm of the brain when awake and active. Alpha is the rhythm of passivity, relaxation. Theta is a rhythm between 4 and 8 vibrations per second and corresponds to deep sleep, while the delta rhythm corresponds to very deep sleep.

1 Electric machines and cables and antennas give off waves that effect us.

2 Radiation from cell phones is absorbed by the brain and ocular tissue.

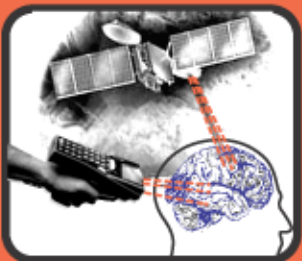

3 TV's electromagnetic field plunges us into a hypnotic state favorable to suggestion.

4 For 30 years now research scientists have sought to implant microchips...

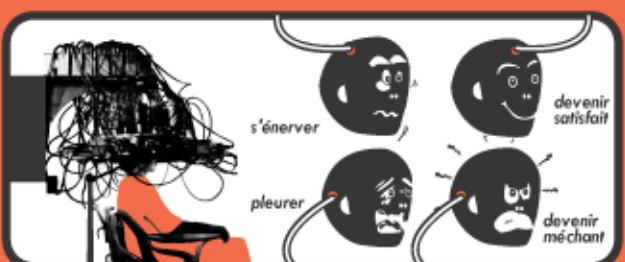

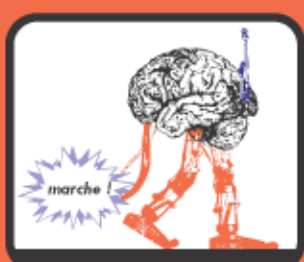

... beings in order to set up what they call a psychocivilized society.

5 Walter Bowart has affirmed that in 1989 a group of English women served as guinea pigs by being exposed to EHF microwave rays by the English army.

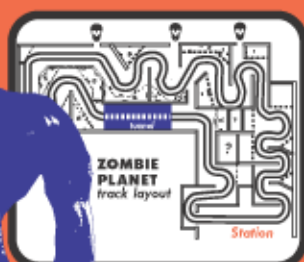

6 A document published in 1996 by the Scientific Advisory Committee of the US Air Force foresees the possibility of developing "electromagnetic sources of energy that could be coupled with the human body in a way that would hinder voluntary muscular movement,..."

... control emotions, put humans to sleep, transmit suggestions, interfere with both short- and long-term memory, produce an acquisition of experiences or erase acquired experiences. It also appears possible to create high-fidelity speech inside the human body, making psychological suggestion or direction possible."

7 Elisabeth Rauscher, a nuclear physicist (San Leandro Technological Research Laboratory in California), once declared, "Give me money and a three-month deadline and I'll be able to modify the behavior of 80% of the inhabitants of this city without their knowledge. I'll make them happy, or at least they'll think they're happy, or I'll make them aggressive."

8 Psychotronic arms do not come under the existing Treaties and Conventions, notably the Convention on Biological Arms of 1972, the Convention on Chemical Arms of 1993 and the Convention on Inhumane Arms of 1980 (revised in 1995).

A 1998 report by the U.S. Air Force lists a certain number of these arms: "Infrasounds / VLF" [or very low frequency] which disorient and alarm, "hardening the functioning of organs by causing trauma and spasms in the digestive system", "neural inhibitors" that incapacitate, paralyzing synaptic connections, "hallucinogens" or "paranoics" that disorient, confuse and incapacitate, "tranquilizers" or "sedatives" transmitted by the lungs or skin, "barablocks" or "tranquilizing darts and anesthetizing bullets", "electronic rifles" or "pistols that knock out" and weaken the central nervous system, "high-power microwaves (HPM)" that "induce confusion, stupor and coma in people and animals" (Excerpt from Non-lethal Weapons: a Structural Study of a Future Integration, USAF, 98). The HAARP project (High Frequency Active Auroral Research Program), which is jointly directed by the US Air Force and the US Navy, makes it possible both to manipulate world climate through local controlled modifications of the ionosphere, and to bombard human brains with low-frequency waves.
